

Control of Plant-parasitic Nematodes on Strawberry

www.ncagr.com/agronomi/uyrnem.htm

Strawberries are susceptible to several nematode species. Apreplant treatment with a soil fumigant is suggested for commercial strawberry plantings. Even in the absence of any serious nematode problems, preplant soil fumigation is strongly recommended since it will also help control weeds and soil-borne diseases.

For Additional Assistance

- Call your NCDA&CS regional agronomist or the Agronomic Division office in Raleigh (919-733-2655).
- Visit the NCDA&CS Agronomic Division Web site at www.ncagr.com/agronomi/.
- Visit your county Cooperative Extension office.
